Foreword

Under Indirect Tax Laws, classification is the categorization of goods or services crucial to ascertain whether a subject matter is exigible to tax, exemption, rate of tax etc. In GST regime, classification of goods has to be in accordance with Customs Tariff Act which is based on the Harmonized System of Nomenclature (HSN). The classification of services is based on the service code (tariff). Classification of goods or services is a complex procedure of ascertaining whether goods or services are composite, non-composite or mixed, and how to resolve competitive entries etc.

To provide some solution to these issues, the Indirect Taxes Committee of the ICAI has come out with "*E-Handbook on classification under GST*". This e-publication *interalia* covers meaning, need, principles/rules to be considered, steps to be followed etc. for aptly classifying goods/services. This e-handbook provides a deeper knowledge of provisions pertaining to Classification of goods and services under GST in a simplified manner along with relevant notifications issued and few judicial pronouncements.

I appreciate the efforts put in by CA. Madhukar N. Hiregange, Chairman, CA. Sushil Kumar Goyal, Vice-Chairman and other members of the Indirect Taxes Committee for bring out the well aligned material "*E- Handbook on Classification under GST*". I am sure this publication would facilitate our members in practice as well as in industry to acquire specialised knowledge and cope-up with the challenges and complexities relating to classification of goods and services.

CA. Naveen ND Gupta
President, ICAI

Date: 23.07.2018

Place: New Delhi

Preface

Goods and services have been classified across the globe into different segments to see what rates are applicable for goods and services. It is needed to claim exemption and rate of tax applicable.

Considering the importance of Classification in GST and the myriad issues involved, the Committee has come out with “*E-Handbook on Classification under GST*”. This handbook *interalia* cover many possible issues involved in classification exercise including general rules and principles of classification. Understanding the relevance of the Harmonized System of Nomenclature, various steps in classification, concerned notifications on the issue along with relevant case laws. This e-publication is an additional resource material complementing the background material under GST.

We would like to express our sincere gratitude and thank to CA. Naveen N. D. Gupta, President and CA. Prafulla Premasukh Chhajed, Vice-President, ICAI, for their guidance and support in this initiative. We must also thank CA. Yash daddha for drafting this E- Handbook on Classification under GST and CA. Kapil Vaish for reviewing it.

We encourage reader to make full use of this learning opportunity. Interested members may visit website of the Committee www.idtc.icai.org and join the IDT update facility. We request to share your feedback at idtc@icai.in to enable us to make this handbook more value additive and useful.

Welcome to a professionalized learning experience in GST.

Chapter 1

Introduction

The term “Classification” is defined as *systematic arrangement in groups or categories according to established criteria*. Under the given concept, the arrangement of varied items is into mutually exclusive but related classes.

Under the Indirect Tax regimes prevalent across the Globe including India, the classification of various items which are the subject matter of tax, be it goods or services, is an essential and integral part of the whole levy and collection mechanism. It is important both from the taxpayer’s perspective and tax collector’s perspective to have a definite class or group under which subject matters of tax can be divided. The primary intention of classifying them is to determine whether or not the same would be encumbered by the levy of these taxes and if so, under which category the tax liability would arise.

However, the requirement of classification is not restricted only for understanding the rate of tax on a specific subject matter of tax. The various benefits of classification are as under:

1. **Leviability of Tax**

Classification of subject matters of tax into various classes identifies the taxable and non-taxable items for determining the scope of leviability of tax through a particular legislation.

2. **Goods versus Services**

After determining whether a particular subject matter is leviable to tax or not, classification principles further assist in determining if they are taxable as goods or as services. The differentiation between ‘goods’ and ‘services’ not only impacts the rate of tax, but also the time, place and value for the tax.

3. **Exemptions**

The Government exempts specific categories of items from levy of taxation. Exemption from tax is a policy decision of the Government which finds its base from the classification of items into specific categories which are driven by various socio-economic factors.

4. **Rate of Tax**

The Government is assisted by the principles of classification to identify the demerit and merit rates of various categories of items. Such categorization helps the Government to ensure that the burden of taxation is not regressive for the tax payers and also does not negatively affect the revenue collection for the Government.

5. **Standardization and avoiding differentiation**

Classification also helps the Government to collect data about various trades and industries in a systematic and standardized manner. Further it helps to bring on par various similar and like items sold by different industries and sizes of business to ensure uniformity.

Classification under Goods and Services Tax

Across the Globe under various GST regimes, classification as a subject is not a complex issue for the simple reason that across the Globe, most economies have a two rate GST structure. Under such structure, the two rates are Merit Rates and Demerit Rates. All the items under the ambit of GST are classified under given two rates only. The merit rate is the rate which is closer to 5% tax bracket and demerit rate is the rate which is within the bracket of 16% to 20%. Hence disputes for classification under GST are less or minimal.

Under the Indian environment, the GST is also indigenous. Hence the issues relating to classification which are not prevalent across the world are applicable in India. There are various reasons which add up to the complexity under the classification in India. One major reason for same is the multiple GST Rate structure. Today, Indian GST has 8 different types of GST Rates namely 0%, 0.25%, 1%, 3%, 5%, 12%, 18% and 28%. Since the industry structures are different and exemptions add to this complex web of multi point rate structure, a situation of arbitrage due to classification arises. Some reasons for such multiple rate structure are:

1. Principle of Equivalence and size of revenue collection

In the context of Indian economy, the size of tax collection from Direct and Indirect Taxes is an important factor for economic prosperity. In developed countries the dependence on tax revenues for Governments is only up to 18% to 22% from total collections, whereas, the benchmark of tax collection dependence in developing countries is between 52% to 54% from total revenue collections. However, in India, dependence on tax collections by Governments is significantly high and ranges from 60% to 64% from the total revenue collections.

Since tax collection contributes significantly to the government revenue, when migration to Goods and Services Tax happened from Central Excise, Service Tax and State VAT regime, there was an anxiety that tax collections should not dip from current levels under GST and ambition of collecting higher tax was obviously pivotal.

Thus the challenge of collecting steady or higher revenue bounded Government to keep the rate of tax at certain levels and it was backed by the Principle of Equivalence. According to this principle, the rate of tax under GST should be within the deviation of up to 3% (either at the higher or at the lower side) from the rate of tax which was applicable cumulatively under Central Excise, Service Tax and State VAT. The rate of taxes under the erstwhile regime was multi fold and chaotic.

Hence with a view to maintain the rate of taxes which were under the erstwhile indirect tax regime, the rates of tax under GST is multifold applicable on different classes of items

(be it goods or services) differently.

2. Political Factors

The ideal GST structure in India would have been a 3 layered rate structure comprising of merit rate, demerit rate and standard rate (or mid-point rate). The merit rate would have been ideally an exemption rate whereas demerit rate would have been around 20% (which is now 28%) and mid-point rate around 12% to 15%. But since the consensus formed in Parliament was for a GST rate not greater than 18% the government could not keep items above 18% and if items were pegged to 12% (i.e. mid-point rate) then to offset the revenue deficit more items were pegged to 28% GST Rate. Due to this the rate of 28% had more than 250 items. With increase in political pressure, almost 200 items were taken out of 28% rate subsequently.

In multiple Tax Rate structure, there is always a certain amount of arbitrage created between the tax payer and the tax collector for classification of items. Example the tussle to classify items between the rates 18% or 28% shall be always on the cards. Since the Government in India as explained above, is heavily dependent on the tax collections as its source of revenue, they will always be tempted to classify items at the rate bracket of 28% and for tax payer the situation will be vice-versa. The 10% gap between the rates opens the flood gates for litigation and divergent interpretations. In fact tax rate gap of 7% between 5% and 12% rates is also significant.

Classification disputes are not new in the Indian Taxation system. According to an estimate, currently around 11200 cases are pending before the Supreme Court of India which are pure classification issues under erstwhile Central Excise, Service Tax and VAT regime. Hence India has 70 years of History in the disputes over classification of items under tax legislations.

Applicable Laws Useful For Classification under GST

The scheme of Goods and Services Tax in India is governed through following laws:

- The Central Goods and Services Tax Act, 2017
- The State Goods and Services Tax Act, 2017
- The Integrated Goods and Services Tax Act, 2017
- The Union Territory Goods and Services Tax Act, 2017
- The Goods and Services Tax (Compensation to States) Act, 2017

Under each law, the charge of tax is on supply which has been defined under Section 7. However the various Governments (Central State or UT) derive power to levy and collect taxes at specified rates under Section 9(1) of the CGST Act 2017, Section 5(1) of the IGST Act 2017 and Section 9(1) of the SGST/UTGST Act 2017.

Various Steps in Classification of Goods or Services

Since classification and its principles are of considerable importance for taxability and other allied purposes for goods and services, it is important to understand the process flow which should be followed to identify the correct classification, rate of tax and HSN Code for various items. Various provisions of law which are of assistance in this regard are as under:

1. Definition of 'Goods' and 'Services'
2. Activities listed in Schedule-II
3. Activities listed in Schedule-III
4. Identification of Composite Supplies or Mixed Supplies
5. Identification of HSN Code from the rate notification
6. Applicability of Principles of Interpretation applicable on Customs Tariff Act 1975 now made applicable vide Notification No 01/2017-CT (Rate) dated 28.06.2017.
7. Understanding the Service Code (Tariff) applicable on services in accordance with Annexure to Notification No 11/2017-CT (Rate) dated 28.06.2017.

Chapter 2

Identification of Supply of Goods or Services

Definition of 'goods' and 'services'

The tax is on supply of either goods or services. In case the supply is neither of goods nor of services then no tax shall be leviable on such supplies. Hence, the first step for classification under GST starts with determining whether any item which is supplied is either goods or services or none.

The terms 'goods' and 'services' have been well defined under Section 2 of the respective laws. According to Section 2(52) of the CGST Act 2017, the term goods is defined as under:

(52) "goods" means every kind of movable property other than money and securities but includes actionable claim, growing crops, grass and things attached to or forming part of the land which are agreed to be severed before supply or under a contract of supply;

The definition is indeed a wide one and encompasses almost everything having some value in the commercial sense and which has the attributes of goods like possession, transferability, etc. It may be noted that the definition is exhaustive and only those items which would fit into the definition would be covered. Of course the definition is contextual in nature and has to be interpreted so as to suit the situation or context.

The term 'services' has been defined under Section 2(102) of the CGST Act 2017 thus:

(102) "services" means anything other than goods, money and securities but includes activities relating to the use of money or its conversion by cash or by any other mode, from one form, currency or denomination, to another form, currency or denomination for which a separate consideration is charged;

One way of interpreting the definition of service is that it encompasses everything which is left in the universe which does not constitute goods. However the said interpretation leads to some vague conclusions. This forces one to believe that immovable property would also constitute service. However it is an understanding amongst the lawmakers and taxpayers that immovable property has been as of now kept outside the purview of GST. Due to lack of clear cut provisions in the law, the possibility of classification of immovable property as services arises which is absurd.

Another way of interpreting the definition of service is that all such articles which are excluded by the definition of goods but have features of movability are treated as services. The way the given law has been developed, the latter interpretation is more practical and confirms the intention of law makers.

However, in the days to come disputes are bound to arise from determination as to whether an

activity is supply of goods or services, especially considering the fact that rules differ for fixation of place of supply, time of supply and valuation under GST for Goods and Services.

Schedule-II - Classification of activities as Supply of Goods or Supply of Services

Drawing power from Section 7(1)(d) of the CGST Act, 2017, certain activities have been treated as supply of Goods or Supply of Services under Schedule –II appended to the Acts. It is interesting that activities in Schedule-II do not classify any article as goods or services. Rather, it consists of certain activities which can be either treated as supply of goods or supply of services. There can be a situation where, an item might neither be goods nor services but its supply is treated as supply of service by virtue of Schedule-II (Example Transactions in Land and Building). Hence Schedule-II should be read in isolation since it is *qua* activity but not *qua* the item which is subject matter of tax.

Various activities which have been treated as Supply of Goods under Schedule-II are as under:

1. Any transfer of title in Goods
2. Any transfer of title in goods under an agreement which stipulates that property in goods shall pass at a future date upon payment of full consideration as agreed
3. Goods forming part of the assets of a business transferred or disposed of by or under the directions of the person carrying on the business so as no longer to form part of those assets, whether or not for a consideration.
4. When any person ceases to be a taxable person, any goods forming part of the assets of any business carried on by him shall be deemed to be supplied by him in the course or furtherance of his business immediately before he ceases to be a taxable person, unless:
 - (a) the business is transferred as a going concern to another person; or
 - (b) the business is carried on by a personal representative who is deemed to be taxable
5. Supply of goods by any unincorporated association or body of persons to a member thereof for cash, deferred payment or other valuable consideration.

Various activities which have been treated as Supply of Services under Schedule-II are as under:

1. Any transfer of right in goods or of undivided share in goods without the transfer of title thereof
2. Any lease, tenancy, easement, licence to occupy land
3. Any lease or letting out of the building including a commercial, industrial or residential complex for business or commerce, either wholly or partly
4. Any treatment or process which is applied to another person's goods

5. Transfer of business assets by or under the direction of a person carrying on a business, goods held or used for the purposes of the business are put to any private use or are used, or made available to any person for use, for any purpose other than a purpose of the business, whether or not for a consideration, the usage or making available of such goods
6. Renting of immovable property
7. Construction of a complex, building, civil structure or a part thereof, including a complex or building intended for sale to a buyer, wholly or partly, except where the entire consideration has been received after issuance of completion certificate, where required, by the competent authority or after its first occupation, whichever is earlier.
8. Temporary transfer or permitting the use or enjoyment of any intellectual property right
9. Development, design, programming, customisation, adaptation, upgradation, enhancement, implementation of information technology software;
10. Agreeing to the obligation to refrain from an act, or to tolerate an act or a situation, or to do an act.
11. Transfer of the right to use any goods for any purpose (whether or not for a specified period) for cash, deferred payment or other valuable consideration.
12. Composite supply of works contract as defined in clause (119) of section 2
13. Composite supply, by way of or as part of any service or in any other manner whatsoever, of goods, being food or any other article for human consumption or any drink (other than alcoholic liquor for human consumption), where such supply or service is for cash, deferred payment or other valuable consideration.

On perusal of the above list some interesting facts can be observed:

- A. All the activities in relation to Goods which are constituted within the definition of supply cannot be classified as supply of goods always. In some cases, activities in relation to goods can be treated as supply of services also.**

Transfer of Right in Goods without transfer of Title of such goods is a supply of service, whereas, simple transfer of title in goods is treated as supply of goods. For example if a company sells heavy machinery then it shall be treated as supply of goods but if the same machinery is given on lease then it shall be treated as supply of service only. Hence the subject matter of tax i.e. machinery does not change but since the activity undertaken in relation to the same changes, its classification as supply of goods or supply of service also changes.

- B. Activities in relation to neither goods nor services can be still be treated as supply of services.**

In case of lease, tenancy, license to occupy land or renting of immovable property etc,

the activities are carried out on immovable property. Immovable property is neither classifiable as goods nor as services. But given activities in relation to them are classifiable as supply of service. Hence it means that since GST is on activity of supply, few activities relating to immovable properties partake the character of supply of service liable to GST even if the subject matter whose supply takes place is neither goods nor services.

C. Deemed Supply of 'Goods' or 'Services'

Under the given Schedule there are certain activities which do not fall within the ambit of supply. In fact in some cases no activity is undertaken at all. However, with deeming fiction of law, certain transactions have been characterized as either supply of services or supply of goods. In cases, unlike the example mentioned in para B above, the subject matter of tax is either goods or services but the activity or no activity is still a supply. For example, when a person carrying goods as business assets, ceases to be a taxable person then the activity of ceasing as taxable person is deemed to be a taxable supply of goods. Hence even change in status of a person from taxable to non-taxable person shall be treated as a taxable supply of goods.

D. Composite Supply and its treatment

Schedule-II recognizes two supplies as composite supplies i.e. Works Contract and Supply of Food as part of a service contract. In given supplies, the supply of goods and supply of services are intermingled. Since for levy of tax it is mandatory that a particular supply is either treated as supply of goods or supply of service, it is required that such composite supplies are ultimately classified as a single supply of either goods or services. The concept of Composite supply in itself has its set of principles which are useful for classification of such supplies as supply of goods or supply of services, but in case of given two supplies, Schedule-II through the wisdom of lawmakers defines it as supply of services.

E. Declared Supplies influenced from erstwhile Service Tax provisions.

Under the erstwhile provisions of the Chapter V of Finance Act 1994, under Section 66E, a list of activities were declared as services for the levy of Service Tax . Schedule-II of the CGST Act 2017 and other respective State GST Acts are based on the concepts arising from such list and hence many activities which were covered by list of services under Section 66E of the said Act have been treated as supply of service under the GST Acts also.

Chapter 3

Classification of Activities which are neither Supply of Goods nor Supply of Services

In contrast to Schedule-II, drawing power from Section 7(2)(a) certain activities have been specified under Schedule-III which are neither treated as supply of goods nor as supply of services. Hence the given Schedule is also *qua* activity and not *qua* item. Since GST is leviable on Supply of Goods or Services, even if any of the items as specified in Schedule-III is either goods or services, by deeming fiction, activity undertaken on it under Schedule-III shall constitute as if no supply has taken place at all in terms of the GST Acts.

Activities which are enumerated under Schedule-III are as under:

1. Services by an employee to the employer in the course of or in relation to his employment.
2. Services by any court or Tribunal established under any law for the time being in force.
3. The functions performed by the Members of Parliament, Members of State Legislature, Members of Panchayats, Members of Municipalities and Members of other local authorities.
4. The duties performed by any person who holds any post in pursuance of the provisions of the Constitution in that capacity
5. The duties performed by any person as a Chairperson or a Member or a Director in a body established by the Central Government or a State Government or local authority and who is not deemed as an employee before the commencement of this clause.
6. Services of funeral, burial, crematorium or mortuary including transportation of the deceased.
7. Sale of land and sale of building (completed).
8. Actionable claims, other than lottery, betting and gambling.

Chapter 4

Identification of Composite Supplies or Mixed Supplies

In real world, with changing business dynamics, the supplies are also intermingled and entangled. There may be numerous situations wherein two independent supplies are provided together. Such supply can be of goods or services. Various situations which can arise in real world wherein supplies are provided with each other are

- Supply of two or more goods together (Machine with Packing)
- Supply of two or more services together (Storage and Transportation)
- Supply of goods with supply of services (Wall Painting with Paint)
- Supply of services with supply of goods (Machine with Installation)
- Supply of goods with supply of neither goods nor services (Exchange of Currency with Sale of Currency)
- Supply which constitutes taxable and exempted supplies together (Sale of Bakery item with Vegetables)
- Supply which constitutes taxable and non-GST supplies together (Sale of Lubricant with Petrol)
- Supply which is taxable and transactions specified in Schedule-III (Sale of Furniture with sale of Building)

In all the above cases, it is not apparent as to under which category the given supplies can be classified. In fact it is also difficult to determine whether these supplies together are supply of goods or supply of services or both. Further once it is not evident that charge is either on supply of goods or supply of service, it shall be impossible to identify as to what should be the rate of tax applicable on the given supplies.

In case of *Mathuram Agarwal v. State of Madhya Pradesh (1999) 8 SCC 667 (SC)*, it was held by the Supreme Court of India thus:

“The statute should clearly and unambiguously convey the three components of the tax law i.e. the subject of the tax, who is liable to pay the tax and the rate at which the tax is to be paid. If there is any ambiguity regarding any of these ingredients in a taxation statute then there is no tax in law. Then it is for the legislature to do the needful in the matter.”

Thus it is important for a levy to be sustainable that the rate of tax on a particular supply is

unambiguous. For that it is important to identify the nature of supply and its appropriate classification as goods or service.

The CGST Act, 2017, under Section 8, has envisaged given situations and provides a workable solution for classification of such entangled supplies.

Section 8 of the CGST Act 2017 reads as under:

“8. Tax liability on composite and mixed supplies. — *The tax liability on a composite or a mixed supply shall be determined in the following manner, namely:—*

- (a) *a composite supply comprising two or more supplies, one of which is a principal supply, shall be treated as a supply of such principal supply; and*
- (b) *a mixed supply comprising two or more supplies shall be treated as a supply of that particular supply which attracts the highest rate of tax.*

The law provides new terms whose understanding is very critical for the purpose of correct classification of various supplies. These terms as defined under law are enumerated hereunder:

Section 2(30) of the CGST Act, 2017, defines composite supply thus:

(30) *“composite supply” means a supply made by a taxable person to a recipient consisting of two or more taxable supplies of goods or services or both, or any combination thereof, which are naturally bundled and supplied in conjunction with each other in the ordinary course of business, one of which is a principal supply;*

Section 2 (90) of the CGST Act, 2017, defines principal supply as under :

(90) *“principal supply” means the supply of goods or services which constitutes the predominant element of a composite supply and to which any other supply forming part of that composite supply is ancillary;*

Section 2 (74) of the CGST Act, 2017, defines mixed supply as under :

(74) *“mixed supply” means two or more individual supplies of goods or services, or any combination thereof, made in conjunction with each other by a taxable person for a single price where such supply does not constitute a composite supply*

Composite Supply

On the basis of definition for any supply to be a composite supply, it should have the following ingredients

- A supply consisting of two or more supplies
- Both the supplies should be taxable supplies under GST
- Supply can be either of goods or services or a combination of both
- Both or more supplies should be conjunctive (i.e. together at the same time) to each other

- Both or more supplies should be naturally bundled
- It should be in the ordinary course of business to bundle two or more supplies
- Out of both or more supplies, one supply should be a principal supply (i.e. predominant)

Example: When a consumer buys a television set and he also gets a warranty and a maintenance contract with the TV; this supply is a composite supply. In this example, supply of TV is the principal supply, warranty and maintenance service are ancillary

Taxable Supplies

For classifying a supply as composite supply, it is a mandatory condition that both the supplies should be taxable supplies.. For example in case of Hotel Accommodation services, generally CP (Continental Plan) is offered to customers wherein a single price for Room Stay and morning breakfast is charged. Now assuming that the declared tariff of room is more than Rs 1000/-, it becomes a supply which is taxable in nature. Since the cost of breakfast is included in the declared tariff, two supplies are provided together by the Hotel i.e. Hotel Accommodation Service and Restaurant Services and hence it can be classified as composite supply.

Now assuming that said Hotel also has room categories where the declared tariff of room is less than Rs 1000/- per room per night. (The charges for breakfast are already included in the given tariff). In such a case, since the room tariff per night is less than Rs 1000/- the said service is eligible for exemption under GST under notification no 12/2017-CT (Rate) dated 28.06.2017. However the restaurant services provided are still taxable. Thus a bundle of two services can be still treated as composite supply. To understand it properly the definition of taxable supply is important.

According to Section 2(108) of the CGST Act, 2017, the term taxable supply is defined as “a supply of goods or services or both which is leviable to tax under this Act”;

Further the term ‘exempt supply’ is defined under Section 2(47) of the Act thus:

(47) “exempt supply” means supply of any goods or services or both which attracts nil rate of tax or which may be wholly exempt from tax under section 11, or under section 6 of the Integrated Goods and Services Tax Act, and includes non-taxable supply.

On the basis of the above definitions it is evident that taxable supply means a supply which is leviable to GST. However exempt supplies means supplies on which rate of GST is Nil or which are exempt under Section 11 of the Act.

In the given example, the Hotel Accommodation Services provided by Hotel is an exempt supply under Section 11 of the Act since notification no 12/2017-CT (Rate) dated 28.06.2017 has been issued under that Section only. However it is pertinent to note that a given supply shall still qualify as a supply which is leviable to GST but has been exempted under a specific notification.

Thus on basis of this analogy, it is safe to conclude that the term Taxable Supply includes

- Supplies on which GST is payable

- Supplies which are exempt under Section 11 of the CGST Act
- Supplies which are exempt under Section 6 of the IGST Act
- Supplies which attract NIL rate of Tax.

Hence in the given example, since Hotel Accommodation service with breakfast with declared tariff less than Rs 1000/- per room per night, has been supplied together and both are taxable supplies (out of which one is exempt supply) as per the definition given under the law, together they can be treated as composite supply. Further since in the given case, the principal supply shall be that of Hotel Accommodation only it shall be treated as supply of Hotel Accommodation Service in terms of Section 8 of the CGST Act 2017. Thus, the whole supply shall be exempt from GST.

However, in cases where Non Taxable supplies (example supply of Alcohol for Human Consumption with Snacks) is made then it cannot be treated as two taxable supplies made together since Non Taxable supply has been defined under Section 2(78) of the CGST Act 2017 as *“a supply of goods or services or both which is not leviable to tax under this Act or under the Integrated Goods and Services Tax Act”*;

Non-Taxable Supply in spite being an exempt supply cannot be treated as taxable supply. Hence any taxable supply or exempt supply in normal course of business as a naturally bundled supply will never be treated as a composite supply.

Thus on basis of given analogy the summary can be drawn as under:

Supply 1	Supply 2	Naturally Bundled	In Normal Course of Business	Composite Supply
Taxable	Taxable	Yes	Yes	Yes
Taxable	Exempt u/s 11 of the CGST Act, 2017	Yes	Yes	Yes
Taxable	Exempt u/s 6 of the IGST Act, 2017	Yes	Yes	Yes
Taxable	NIL Rated	Yes	Yes	Yes
Taxable	Non Taxable	Yes	Yes	No

Naturally Bundled- In Ordinary Course of Business

The term ‘Naturally Bundled’ has not been defined under the GST Acts. However under the erstwhile Service Tax regime the term “Bundled Services” was explained in the Education Guide issued by CBEC in the year 2012 as under –

“‘Bundled service’ means a bundle of provision of various services wherein an element of

provision of one service is combined with an element or elements of provision of any other service or services. An example of 'bundled service' would be air transport services provided by airlines wherein an element of transportation of passenger by air is combined with an element of provision of catering service on board. Each service involves differential treatment as a manner of determination of value of two services for the purpose of charging service tax is different.

Illustrations –

- A hotel provides a 4-D/3-N package with the facility of breakfast. This is a natural bundling of services in the ordinary course of business. The service of hotel accommodation gives the bundle the essential character and would, therefore, be treated as service of providing hotel accommodation.
- A 5 star hotel is booked for a conference of 100 delegates on a lump sum package with the following facilities :
 - Accommodation for the delegates
 - Breakfast for the delegates,
 - Tea and coffee during conference
 - Access to fitness room for the delegates
 - Availability of conference room
 - Business centre.

As is evident, a bouquet of services is being provided, many of them chargeable to different effective rates of tax. None of the individual constituents is able to provide the essential character of the service. However, if the service is described as convention service it is able to capture the entire essence of the package. Thus, the service may be judged as convention service. However, it will be fully justifiable for the hotel to charge individually for the services as long as there is no attempt to offload the value of one service on to another service that is chargeable at a concessional rate.

Whether services are bundled in the ordinary course of business would depend upon the normal or frequent practices followed in the area of business to which services relate. Such normal and frequent practices adopted in a business can be ascertained from several indicators some of which are listed below –

1. **The perception of the consumer or the service receiver:** If large number of service receivers of such bundle of services reasonably expect such services to be provided as a package, then such a package could be treated as naturally bundled in the ordinary course of business.
2. **Majority of service providers in a particular area of business provide similar bundle of services:** For example, catering on board and transport by air is a bundle offered by

a majority of airlines.

3. The nature of the various services in a bundle of services will also help in determining whether the services are bundled in the ordinary course of business. *If the nature of services is such that one of the services is the main service and the other services combined with such service are in the nature of incidental or ancillary services which help in better enjoyment of a main service, then it will be treated as naturally bundled service.* For example, service of stay in a hotel is often combined with a service or laundry of 3-4 items of clothing free of cost per day. Such service is an ancillary service to the provision of hotel accommodation and the resultant package would be treated as services naturally bundled in the ordinary course of business.
4. Other illustrative indicators, not determinative but indicative of bundling of services in ordinary course of business are –
 - a. There is a *single price or the customer pays the same amount*, no matter how much of the package they actually receive or use.
 - b. The elements are *normally advertised as a package*.
 - c. The *different elements are not available separately*.
 - d. The *different elements are integral to one overall supply*; if one or more is removed, the nature of the supply would be affected.

No straight jacket formula can be laid down to determine whether a service is naturally bundled in the ordinary course of business. Each case has to be individually examined in the backdrop of several factors some of which are outlined above.

The above principles explained in the light of what constitutes a naturally bundled service can be gainfully adopted to determine whether a particular supply constitutes a composite supply under GST and if so what constitutes the principal supply so as to determine the right classification and rate of tax for such composite supply.

Principal Supply

According to the definition of Principal Supply, it should have following features:

- It should be supply of goods or services which constitutes the predominant element of a composite supply
- Any other supply forming part of that composite supply is ancillary supply.

Thus which part of a composite supply is the principal supply must be determined keeping in view the nature of the supply involved. Value may be one of the guiding factors in this determination, but not the sole factor. The primary question that should be asked is what the essential nature of the composite supply is and which element of the supply imparts that essential nature to the composite supply.

Some of the interesting decisions rendered by European Court of Justice and various other

Courts to explain the concept, scope and limitations of Natural Bundling, Principal Supply and Predominant element of supply are enumerated below:

1. **Card Protection Plan Ltd v. Commissioners of Customs and Excise [2012] 22 taxmann.com 176 (ECJ)**

Two or more acts to be regarded as a single supply if they are so closely linked that they form a single indivisible economic supply: Where a transaction comprises a bundle of features and acts, then, whether it constitutes one single supply, or, two or more supplies should be determined taking into account the facts and circumstances of the case. There may be a single supply where some element(s) constitute the 'principal' supply, while others are 'ancillary'. Further, if two or more elements or acts supplied by the taxable person to the customer are so closely linked that they form, objectively, a single, indivisible economic supply, which it would be artificial to split, then, all those elements would constitute a 'single supply' for the levy of tax. The fact that a single price is charged for all elements is not conclusive. [Para 18]

2. **Aktiebolaget NN v. Skatteverket [2012] 22 taxmann.com 175 (ECJ)**

Definition of 'Predominant element determines classification' - *If service is only a better means of enjoying goods sold, then, service incidental to sale of goods - Cost of elements is also relevant, but, cost alone is not decisive* - Assessee entered into a single contract of supply and installation of telecommunication cable across countries. Property in cable passed to client after cable was installed and tested. The Department demanded service tax contending whole of transaction was 'service'. HELD: Supply of Cable and laying thereof are so closely linked that they constitute a single indivisible economic transaction. Predominant element is supply of cable as property in cable is transferred to client without alteration/adaptation to requirement of client and cost of materials is major part of cost. Since supply of goods element is predominant whole contract is a 'sale' and not service and hence not liable to service tax [Paras 31 to 40] [In favor of assessee]

3. **LevobVerzekeringen BV and OV Bank NV v Secretary of State for Finance, Netherlands* [2012] 22 taxmann.com 174 (ECJ)**

Service - Definition of - Under a single contract, basic software supplied, customization carried out and training provided by same supplier - prices were stipulated separately - Department contended that whole transaction amounted to 'supply of service' liable to service tax - HELD : All such elements were so closely linked that they constituted a single indivisible economic transaction. Separate pricing was not relevant. Predominant element was customization as only customization would make the software useful to consumer and price thereof was also higher. Since service element viz., customization was predominant, whole contract constituted a 'single supply of service' and was liable to service tax [In favor of revenue]

Specified descriptions of services or Bundled Service - Principles of Interpretations - Combining various elements into single transaction - If two or more elements are so

closely linked that they form a single indivisible economic supply, which can be split only artificially, all those elements constitute a 'single supply' [In favour of revenue]

Service - Definition of - Predominant element determines classification - If predominant element is service, then, whole transaction amounts to 'service' even if element of goods is also involved - *Predominance is to be determined considering extent, duration, usefulness and cost of various elements, economic essence and intention of parties* [In favour of Revenue]

4. **Volker Ludwig v. Finanzamt Luckenwalde [2013] 31 taxmann.com 287 (ECJ)**

Bundled Services - Every service must normally be regarded as distinct and independent - But, a supply which comprises a single service from an economic point of view should not be artificially split - *Essential features of transaction must be ascertained in order to determine whether there is provision of several distinct principal services or a single service* - There is a single service, if one or more elements are to be regarded as constituting principal service, whilst one or more elements are to be regarded as ancillary services which share tax treatment of principal service - A service must be regarded as ancillary to a principal service if it does not constitute for customers an aim in itself, but a means of better enjoying principal service supplied [Paras 17 & 18] [In favour of Revenue]

5. **Leez Priory v. Commissioners of Customs & Excise [2013] 40 taxmann.com 512 (UKV - DUTIES TRIBUNALS)**

A supply which comprises a single service from an economic point of view should not be artificially split, so as not to distort functioning of tax - Essential features of transaction must be ascertained in order to determine whether taxable person is supplying with several distinct principal services or with a single service - Court must determine whether there are two independent supplies, namely an exempt supply and a taxable supply, or whether one of those two supplies is principal supply to which other is ancillary so that it derives its tax treatment from principal supply - Merely because availment of a service is pre-condition for availment of other services, entire bundle of services cannot be classified as first-mentioned service; just as, an object, requiring a prior license for purchase, cannot, itself, be classified as license itself - Just as fact that a single price is charged is not decisive, if distinct prices are attributed to distinct parts of a transaction that fact also is not decisive [Paras 38 to 43] [In favour of Revenue]

6. **RLRE Tellmer Property SRO v. Tax Directorate of Ústinad Labem* [2012] 23 taxmann.com 244 (ECJ)**

Assessee, an owner of apartments, rented the same and also provided cleaning services of common parts - Assessee charged rent and cleaning charges under separate invoices - Service of renting was exempt under law - Assessee claimed exemption in respect of rent as well as cleaning charges - Department denied exemption in respect of cleaning

charges contending cleaning activity was not a part of 'renting' - HELD : Letting of apartment and cleaning services of common parts are separate transactions - *Cleaning services might be obtained from third party as well, not necessarily it was to be obtained from landlord* - Further, cleaning charges were separately invoiced - Exemption available to letting was not available for cleaning services and it was liable to service tax [In favour of revenue]

7. The United Kingdom Upper Tribunal in **Hon'ble Society of the Middle Temple v. HMRC [2013] UKUT 0250 (TCC): [2013] STC 1998** laid down the key principles for determining whether a particular transaction should be regarded as a composite supply or as several independent supplies. The said principles are summarized as follows:
- a. Every supply must normally be regarded as distinct and independent, although a supply which comprises a single transaction from an economic point of view should not be artificially split.
 - b. The essential features or characteristic elements of the transaction must be examined in order to determine whether, from the point of view of a typical consumer, the supplies constitute several distinct principal supplies or a single economic supply.
 - c. There is no absolute rule and all the circumstances must be considered in every transaction.
 - d. Formally distinct services, which could be supplied separately, must be considered to be a single transaction if they are not independent.
 - e. There is a composite supply where two or more elements are so closely linked that they form a single, indivisible economic supply which it would be artificial to split.
 - f. In order for different elements to form a composite economic supply which it would be artificial to split, they must, from the point of view of a typical consumer, be equally inseparable and indispensable.
 - g. The fact that, in other circumstances, the different elements can be or are supplied separately by a third party is irrelevant.
 - h. There is also a composite supply where one or more elements is/are to be regarded as constituting the principal services, while one or more elements are to be regarded as ancillary services which share the tax treatment of the principal element.
 - i. A service must be regarded as ancillary if it does not constitute for the customer an aim in itself, but is a means of better enjoying the principal service supplied.
 - j. The ability of the customer to choose whether or not to be supplied with an element is an important factor in determining whether there is a composite supply or several independent supplies, although it is not decisive, and there must be a genuine

freedom to choose which reflects the economic reality of the arrangements between the parties.

- k. Separate invoicing and pricing, if it reflects the interests of the parties, support the view that the elements are independent supplies, without being decisive.
- l. A composite supply consisting of several elements is not automatically similar to the supply of those elements separately and so different tax treatment does not necessarily offend the principle of fiscal neutrality.

Time of supply in case of Composite supply

If the composite supply involves supply of services as principal supply, such composite supply would qualify as supply of services and accordingly the provisions relating to time of supply of services would be applicable. Alternatively, if composite supply involves supply of goods as principal supply, such composite supply would qualify as supply of goods and accordingly, the provisions relating to time of supply of goods would be applicable.

Multiple Prices and Composite Supply

In case of composite supply, there is no specific condition that price charged by the supplier from the recipient should be single and composite and hence an interesting issue shall always arise as to whether the supply shall remain a composite supply or not when each constituent of the composite supply is assigned a price and the same is charged separately.

An example of this can be that a company is engaged in supply of machine at Rs 1 lac per machine. The said machine can be installed through a third party or the supplier of machine can also undertake such installation. The charges for installation are Rs 10 thousand. Now if the company executes a contract for supply and installation of the machine at Rs 1.1/- lacs with charges for machine supply and installation services identified separately in the invoice, then the supply shall still remain a composite supply because both supplies are in conjunction with each other and installation is ancillary to the predominant supply of machine. In this case, the predominant supply shall be supply of machine only.

Mixed Supply

Under GST, a mixed supply means two or more individual supplies of goods or services, or any combination thereof, made in conjunction with each other by a taxable person for a single price where such supply does not constitute a composite supply;

Illustration: A supply of a package consisting of canned foods, sweets, chocolates, cakes, dry fruits, aerated drinks and fruit juices when supplied for a single price, is a mixed supply. Each of these items can be supplied separately and is not dependent on the other. It shall not be a mixed supply if these items are supplied separately.

In order to identify if the particular supply is a Mixed Supply, the first requisite is to rule out that

the supply is a composite supply. A supply can be a mixed supply only if it is not a composite supply. As a corollary it can be said that if the transaction consists of supplies not naturally bundled in the ordinary course of business then it would be a Mixed Supply. Once the amenability of the transaction as a composite supply is ruled out, it would be a mixed supply, classified in terms of a supply of goods or services attracting highest rate of tax.

The following illustration given in the Education Guide of CBEC referred to earlier can be a pointer towards a mixed supply of services:

“A house is given on rent one floor of which is to be used as residence and the other for housing a printing press. Such renting for two different purposes is not naturally bundled in the ordinary course of business. Therefore, if a single rent deed is executed it will be treated as a service comprising entirely of such service which attracts highest liability of service tax. In this case renting for use as residence is a negative list service while renting for non-residence use is chargeable to tax. Since the latter category attracts highest liability of service tax amongst the two services bundled together, the entire bundle would be treated as renting of commercial property.”

Time of supply in case of mixed supplies

Mixed supply, if it involves supply of a service liable to tax at higher rates than any other constituent supplies, such mixed supply would qualify as supply of services and accordingly the provisions relating to time of supply of services would be applicable. Alternatively, if the mixed supply, involves supply of goods liable to tax at higher rates than any other constituent supplies, such mixed supply would qualify as supply of goods and accordingly the provisions relating to time of supply of services would be applicable.

CBEC Clarifications on composite and mixed supply

The printing industry in India in particular faces a dilemma in determining whether the nature of supply provided is that of goods or services and whether in case certain contracts involve both supply of goods and services, whether the same would constitute a supply of goods or services or it would be a composite supply and in case it is, then what would constitute the principal supply. It is to be noted that in the case of composite supplies, taxability is determined by the principal supply. To address concerns of the printing industry, CBEC has come out with Circular No. 11/11/2017-GST, dated 20-10-2017, where in it is clarified as under :

“It is clarified that supply of books, pamphlets, brochures, envelopes, annual reports, leaflets, cartons, boxes etc. printed with logo, design, name, address or other contents supplied by the recipient of such printed goods, are composite supplies and the question, whether such supplies constitute supply of goods or services would be determined on the basis of what constitutes the principal supply.

In the case of printing of books, pamphlets, brochures, annual reports, and the like, where only content is supplied by the publisher or the person who owns the usage rights to the intangible inputs while the physical inputs including paper used for printing belong to the printer, supply of

printing [of the content supplied by the recipient of supply] is the principal supply and therefore such supplies would constitute supply of service falling under Heading 9989 of the scheme of classification of services.

In the case of supply of printed envelopes, letter cards, printed boxes, tissues, napkins, wall paper etc. falling under Chapters 48 or 49, printed with design, logo etc. supplied by the recipient of goods but made using physical inputs including paper belonging to the printer, the predominant supply is that of goods and the supply of printing of the content [supplied by the recipient of supply] is ancillary to the principal supply of goods and therefore such supplies would constitute supply of goods falling under respective headings of Chapters 48 or 49 of the Customs Tariff."

Issues in composite and mixed supply read with HSN.

A) Can a composite supply consist of a principal supply which in itself is a complete composite supply?

A question maybe be asked as to whether a composite supply in itself could consist of various supplies which are on standalone basis and can be classified as further composite supplies?

For example, a tour operator may be engaged by a service receiver to provide or arrange air ticketing, land transport, hotel accommodation, tour guide and other related facilities in relation to a package. The tour operator might provide some services out of this through its own means and may procure some services from other vendors. The bundle of given services shall be sold as a "package tour" to the service receiver against a lump sum consideration.

Now for the purpose of taxability, it has to be identified whether it is a composite supply or a single supply? Since the term composite supply is defined in the law, for qualifying the package as composite there needs to be two or more supplies. On a plain reading, it is visible that the given package tour have many elements which are together making a bouquet of tour operator services. The principal supply in the given case has to be the predominant supply of the whole bouquet. In the given case, the tour operator service which is defined as a stand-alone service under the Central GST Rate Notification No 11/2017 dated 28.06.2017 can be treated as the principal supply. Since the predominant element of such supply is not air travel or hotel booking or tour guide by definition the tour operator service can be treated as the principal supply. Hence the rate of GST as applicable on tour operator service shall be applicable to the given supply.

B) Can a composite supply consist of a principal supply which is not listed under the Rate Notification as an independent supply?

The issue in this case can be understood through an example. Let's say a company is undertaking end to end handling of export consignment from the premises of an exporter based in India to a place outside India at the premises of the buyer of exporter, for a

single price. Now the question will be whether it is a composite supply and if yes what is the principal supply?

In the given case, the logistics company shall undertake road transport, ocean transport, storage, warehousing, customs clearance etc. The given service of end to end logistics is provided in normal course of business and is standard service understood in the market. However it encompasses in itself, various elements which are also provided independently. It will be tricky to identify the predominant supply out of aforesaid elements. However if one analyses closely the principal supply in the given case is the timely delivery of goods to buyer of the service receiver with a particular level of service quality level. The contractual arrangement is for transportation in a specific timely manner. The said description might not fit in any of the HSN classification schedules. Hence the same should be treated as a "Transportation Service". However the HSN has an entry which is Transportation of Goods by vessel, road and air. The given service fits in classification of Transportation of Goods Service i.e. Heading 9965 but it does not falls under either of the groups i.e. Group 99651 (Land transport services of Goods) or Group 99652 (Water transport services of goods) or 99653 (Air and space transport services of goods). Thus the annexure to rate notification does not contains any HSN for given service. But the main rate notification contains Entry 9(vi) under Heading 9965 as Goods Transport Services other than rail, vessel, air, etc with rate of GST at 18%. The given service needs to be classified accordingly which actually might not reflect the true color of the principal supply of end to end logistic service. However due to lack of any specific HSN classification, the same needs to be classified in accordance with the description.

It has to be understood that HSN is based on the concept of logical classification of services. But in cases where the nature of service cannot be classified according to given logic, especially in those cases where it is part of a composite supply, then by following the akin rule or essential character, classification needs to be made.

It is not out of place to mention that principles for classification of services under erstwhile Chapter V of the Finance Act 1994 were based on the same lines as specified under UNCP. Further the concept of Composite and Mixed Supply was also part and parcel of the said classification Section (i.e. Section 66F). The said principles followed the logical steps enumerated hereunder:

1. Unless otherwise specified, reference to a service (herein referred to as main service) shall not include reference to a service which is used for providing main service.
2. Where a service is capable of differential treatment for any purpose based on its description, the most specific description shall be preferred over a more general description.
3. Subject to the point number (2), the taxability of a bundled service shall be determined in the following manner, namely :—
 - a. if various elements of such service are naturally bundled in the ordinary course of

business, it shall be treated as provision of the single service which gives such bundle its essential character;

- b. if various elements of such service are not naturally bundled in the ordinary course of business, it shall be treated as provision of the single service which results in highest liability of service tax.

Thus for classification of services, under GST, reliance can be placed on UNCPC and precedents laid down under the erstwhile Service Tax provisions post 1-7-2012.

However, since none of the above has any legal backing under GST, unlike HSN for goods as given in the rate notification, confusion and litigation in respect of classification of services is bound to remain a reality for some time at least.

Independent Supply

Interestingly, in many cases when two or more supplies are made together, then there can be a possibility that such supplies are neither composite nor mixed but are two independent supplies which happen at the same time or same occasion. It is important not to feel compelled, when more than one supplies are made at the same time or same occasion, to forcible fit them into composite-mixed supply. In such cases, the classification of such supplies shall be determined based on their individual characteristics.

An example which can be referred for given case can be as under:

1. Purchase of vegetables and kitchen utensils at a super market – here, the householder is making a single visit to the super market and from the fresh goods counter purchases certain vegetables and from the kitchenware counter purchases some utensils. Except of the commonality of the time of purchase and the parties involved in the supply, there is no other reason to suspect that these two items may attract composite-mixed supply. They are two independent supplies attracting their respective rates of tax on the same Tax Invoice
2. Authorized Service operations who has a spares counter where parts required for vehicle servicing are supplied to customer and the service counter where those very parts are replaced in the vehicle. Even here, though the parts and replacement service are supplied at (or about) the same time or same occasion, they are not to be forced into composite-mixed supplies. In fact, reference may be had to circular 47/21/2018-GST dated 08th June, 2018 wherein it is clearly stated, based on the prevalent practice in this trade, that these are independent supplies. However, it may be noted that tinkering and body-work will not be independent supplies but composite supply where the labour/skill is principal supply.

When two or more supplies are involved which are artificially bundled together and for a single price, then it is a mixed supply. And whether or not for a single price, the two (or more supplies) clearly shows any one of them being the predominant object of the customer contracting with the supplier and the others are an outcome of the former, then it is a composite supply. But,

when each supply stands on its own and purchasing one does not affect (favourably or adversely) the decision to purchase the other, then it is an independent supply.

Chapter 5

Classification of Goods as per Notification

The Central Government, on the recommendations of the GST Council, has issued Notifications Number 01/2017-CT (Rate) dated 28.06.2017 prescribing the Rate of Tax (Schedules) for specified goods under CGST/IGST ("Rate Notification"). This Notification is divided into 6 Schedules, as follows:

- (i) 2.5% (Schedule I);
- (ii) 6% (Schedule II);
- (iii) 9% (Schedule III);
- (iv) 14% (Schedule IV);
- (v) 1.5% (Schedule V); and
- (vi) 0.125% (Schedule VI)

The Central Government by way of further Notifications has amended the Rate Notification to specify any change of rate of duty on any commodity, from time to time.

It is pertinent to note that the Explanation to the Rate Notification No. 1/2017-Central Tax (Rate) dated 28.06.2017 states thus :

For the purposes of this Notification:

...

(iii) "Tariff item", "sub-heading" "heading" and "Chapter" shall mean respectively a tariff item, sub-heading, heading and chapter as specified in the First Schedule to the Customs Tariff Act, 1975 (51 of 1975).

(iv) The rules for the interpretation of the First Schedule to the Customs Tariff Act, 1975 (51 of 1975), including the Section and Chapter Notes and the General Explanatory Notes of the First Schedule shall, so far as may be, apply to the interpretation of this notification.

Therefore, while the Rate Notification under GST provides the rate of tax on goods and services, in order to interpret these Rate Notifications for purposes of levy of GST, one has to read the same along with the First Schedule (including the Section and Chapter Notes and General Explanatory Notes) of the Customs Tariff Act, 1975 ("Tariff").

The broad outlay of the Customs Tariff Act, 1975, its Schedules, Rules of Interpretation, the Harmonised System of Nomenclature vis-à-vis the Tariff and the relevance of erstwhile classification disputes in the new GST regime are enumerated as under:

Harmonized System of Nomenclature (“HSN”)

With increase in international trade, the World Customs Organization (“WCO”) developed a Harmonized System of Nomenclature (“HSN”), in order to facilitate trade flow and analysis of trade statistics. The following are the features of the HSN:

- (a) Adopted by 137 countries to ensure uniformity in classification of products;
- (b) Contains about 5,000 commodity groups – each identified by a 6-digit code (it is pertinent to note that both the Tariff in India follow an 8 digit code system for further clarity in trade volumes and a more specific classification of indigenous products);
- (c) Amended over regular intervals of 4/6 years, taking into consideration the technological advancements in any field – last amendment approved by the WCO in 2009, and brought into force with effect from 1-1-2012;
- (d) For ensuring uniformity, WCO has published the Explanatory Notes to various headings/ sub- headings;
- (e) The Customs Tariff in India was aligned to the HSN w.e.f. 28.02.1986 (whereas the Excise tariff was aligned w.e.f. 1-3-1986).

Customs Tariff Act, 1975

Prior to the advent of GST, in order to determine the Customs duty leviable on a particular commodity, one had to refer to the Customs Tariff Act, 1975 (“CTA”) for the appropriate classification of the goods. The following are the broad features of the CTA:

S. No.	Particulars	Customs Tariff Act, 1975 (“CTA”)
1.	Chapter linking the main Act with the Tariff Act	Section 12 of the Customs Act, 1962 states that duties of customs shall be levied at such rates as may be specified under [the Customs Tariff Act, 1975 (51 of 1975)], or any other law for the time being in force, on goods imported into, or exported from, India.
2.	Number of Schedules	2
3.	Schedules	Import Tariff Export Tariff (contains 49 items [as of 01.03.2011] , most of which are exempt)
4.	Sections	21
5.	Chapters	99 (Chapter 77 is blank, reserved for future use)
6.	Columns	5 (Tariff Item, Description of goods, Unit, Standard Rate of duty and Rate of duty for Preferential Area – e.g. Nepal, Myanmar, etc.)

Broad outline of the Tariff

It is of primary importance to understand the structure of the Tariff, and the nomenclature used for various parts of the same, in order to begin classification of any relevant item, which is as set out below:

- (a) Section
- (b) Chapters, and sub-chapters
- (c) Headings and Sub-Headings

Section	Chapter	Headings
<ul style="list-style-type: none"> • SECTION is a grouping of a number of Chapters which codify a particular class of goods. Each Section is related to a broad class of goods, for instance: <ul style="list-style-type: none"> • Section I : Live Animals • Section IV – Prepared foodstuffs, beverages • Section XII – Footwear, Headgear, Umbrella, Articles of human hair 	<ul style="list-style-type: none"> • CHAPTER and sub-chapters contain a particular class of goods, for instance the Section on Prepared foodstuffs, beverages covers Chapters like <ul style="list-style-type: none"> • Chapter 16: Preparations of meat, fish, etc. • Chapter 17: Sugar and sugar confectionery • Chapter 18: Cocoa and cocoa preparation 	<ul style="list-style-type: none"> • Each chapter is further divided into various HEADINGS and sub-headings depending upon the different type of goods covered within the Chapter, for instance Sugar and Sugar confectionery is further divided into headings like <ul style="list-style-type: none"> a) Cane or beet sugar. b) Other sugars, molasses (refining of sugar) c) Other sugar confectionery

Reading the Tariff

Arrangement of Goods under the Tariff

It is important to first narrow down the search for the relevant classification by scaling it down to a particular Section or Chapter.

It is interesting to note that the various commodities grouped under the Sections, Chapters, etc are arranged in increasing order of manufacturing process required on the said commodity – for instance, the Tariff begins with natural products, raw materials, goes on to semi- finished goods and concludes with fully manufactured goods.

Reliance is not to be placed solely on the Section or Chapter Titles to classify the product therein.

Eight-digit classification

Once the search has been restricted to a Specific Chapter, each Chapter begins with a set of Notes that are to be interpreted along with various headings in the Chapter. Such Notes may contain definitions of terms used in the Chapter and specific inclusions and exclusions in the Chapter.

The next portion in the Chapter would comprise a table setting out the Tariff Item, description of goods, Unit, and Rate of duty applicable thereon.

The Indian Tariff System employs the 8-digit format, which is explained below by way of an example.

The rate of duty in the Tariff is mentioned against the respective Tariff Items.

Relevance of Dashes

The dashes at the beginning of the description of a group of items indicate the following:

Dashes	Meaning
(-) single dash	A Group of goods
(- -) Two dashes	Sub - group
(- - -) Triple dash or (- - - -) Quadruple dash	Sub – sub classification

Examples within Chapter 20 would be as follows:

Tariff Item	Description of Goods	Unit	Rate of Duty (Standard)	Rate of Duty (Preferential)
2008	Fruit, nuts and other edible parts of plants, otherwise prepared or preserved, whether or not containing added sugar or other sweetening matter or spirit, not elsewhere specified or included			
	- Nuts, groundnuts and other seeds, whether or not mixed together			
2008 11 00	-- Ground nuts	Kg.	30%	-
2008 19	- Others, including mixtures			
2008 19 10	--- Cashew nut, roasted, salted or roasted and salted	g.	45%	-
2008 19 20	--- Other roasted nuts and seeds	g.	30%	-

The Mumbai CESTAT in case of *Schnectady Herdilla Ltd v CCE (2007) 208 ELT 110* held that for classification under Tariff headings with double (--) entry before them, the goods have to satisfy specifications of single dash (-) preceding them.

Other facets of the Tariff

- (a) The Third Column of the Tariff – “Unit” – indicated by abbreviations – these are mandatory for use in Customs documents, except when impractical (e.g. oil in kgs).
- (b) The % sign in Column 4 indicates that duty is charged “ad valorem” on the value of goods.
- (c) Only sub-headings at the same level (same dashes) are comparable; for instance, in the above example, cashew nuts, roasted and other roasted nuts is comparable, but cashew nuts and ground nuts are not comparable.

Special provisions in Customs Tariff made applicable to GST Rate Schedule for Goods

Though most of goods are classified as per the above system of HSN, special classification is used in certain cases.

Like the following

- All goods imported under “project imports-98.01”
- All laboratory chemicals in packs less than 500 gms or 500 ml-98.02
- All baggage of passengers or member of crew-98.03
- Goods for personal use imported by post or air-98.04
- Stores on board of vessel or aircraft-98.05

These goods will be classified in these headings, irrespective of actual classification as per the Customs Tariff.

Section Notes and Chapter Notes

Each Section and Chapter under the Tariff is accompanied by the notes known as “Section Notes” and Chapter Notes. These are given at the beginning of the Section or Chapter respectively which governs the concerned Section or Chapter as the case may be. In the case of Section Notes, they are applicable to each Chapter which is part of a specific section of the Tariff.

Classification is to be determined only on the basis of description of the heading read with relevant section or Chapter notes. Since these notes are part of Tariff itself, these have full statutory backing. Various Tribunals have held that coverage of respective headings has to be determined in the light of the respective section and Chapter note. Hence in this sense, the section and Chapter note have overriding force over the respective headings and sub-headings.

In *Fenner (India) Ltd v CCE (1995) 97 ELT 8 (SC)*, it was observed that tariff schedule would be determined on terms of headings and any relevant section or Chapter notes. In *CC. v Sanghavi Swiss Refills P Ltd (1997) 94 ELT 644 (CEGAT)*, it was held that section notes and Chapter notes, being statutory in nature, have precedence over functional test of commercial parlance for the purpose of classification.

In the case of interpretation of an exemption notification also, the Supreme Court in the case of *Gujarat State Fertilizers Co v CCE (1997) 91 ELT 3 SC* laid down the principle in its judgment that Chapter Notes of Chapter of Tariff referred to in the notification have to be read as part and parcel of exemption notification.

Only in cases where a notification is clear and expresses a specific intent the scope of Section Note or Chapter Note as the case may be, is restricted and the language of the notification shall be given preference. It was held so in the case of *New Holland Tractors v.s CCE (2010) 253 ELT 249 (CESTAT)*.

However when a notification grants exemption with reference to a particular heading or sub-heading, the notification will have to be interpreted and applied in the light of section notes and

Chapter notes to Tariff as held by CESTAT in case of *CCE v Bharat Metal Industries (1999) 105 ELT 494 (CESTAT)*

HSN and Classification

At the outset, the HSN Explanatory Notes cannot override and dilute the language under the CTA. However, in case of ambiguity, resort to the HSN is permissible provided there is no conflict with the Headings, Chapter Notes or Tariff Notes. In *CCE v. Wood Craft Products Ltd. (1995) 77 ELT 23 (SC)*, it was held that as per the Statement of Objects and Reasons of Central Excise Tariff Bill, 1985, the new tariff has been introduced, based on HSN to reduce classification disputes. Thus, in case of doubt, the HSN is a safe guide for ascertaining the true meaning of any expression used in the Act, unless there is an expressly different intention indicated in the Tariff itself.

The HSN Explanatory notes have also been held to have overriding effect over trade parlance in case of *Health India Laboratories v. CCE (2007) 216 ELT 161 (CESTAT) affirmed in (2008) 22) E.L.T. A133 (S.C.)*

At the same time, in the case of *New India Industries Ltd. v. CC, Bombay (1994) 73 ELT 723* it was held that the HSN Explanatory Notes have persuasive value but do not have any statutory authority.

Furthermore, in the case of *Consolidated Coin Co. P. Ltd. v CCE (2013) 287 ELT 221 (CESTAT)*, the Court observed that US Customs Rulings may be considered for classification disputes, since both US and India follow the HSN based classification.

Department to prove classification

The burden of proof that a product is classifiable under a particular Tariff head is on the Department and must be discharged by proving that it is so understood by the consumers of products in common parlance. It was held so in case of *CCE v. Vicco Laboratories (2005) 179 ELT 17 (SC 3 Member Bench)*.

Practical Guide for Classification under GST

Step-wise approach

In terms of the foregoing, given below is a step-wise approach for classification of goods under GST:

- **Step 1:** Identify the goods that require classification.
- **Step 2:** In the Tariff Schedule, commodities are arranged in increasing order of manufacturing process - Identify the broad Sections and Chapters, the said commodity would fall under
- **Step 3:** By way of application of General Rules of Interpretation, classify the product in terms of the 8-digit-classification
- **Step 4:** Find the relevant sub-heading, as per Step 3. The GST Rate Schedule (along with amending notifications) has specified various rates, grouped under 4-digit or 6-

digit-classification. Further, a particular Heading may appear in several Schedules, for example, CTH 2106 [Food preparations not specified elsewhere]

- **Step 5:** Find the relevant description of heading in GST Rate Schedule and corresponding Rate

Logical Steps to be followed at the time of classification under Tariff Schedules

- Whether the Section is not applicable on specific goods?
- If yes, no need to look into any of the Chapters within the said Section.
- Whether the Section is applicable on specific goods
- Whether the Chapter is not applicable on specific goods
- If yes, no need to look into any of the Headings within the said Chapter
- If the Chapter is applicable on specific goods

Then, within the Chapter see the description of the Heading which accommodates given Goods.

Thereafter find out the sub-heading which covers the given goods.

Chapter

General Rules of Interpretation

If the description read with section or Chapter notes is not enough to correctly classify the goods, then general rules of interpretation have to follow. The principles governing the appropriate classification of goods under the Tariff, as set out in the 'General Rules for Interpretation of this Schedule' to the Customs Tariff are set out below.

Rules to be applied sequentially

Classification is to be first tested on the basis of Rule 1. Only if Rule 1 does not resolve the issue, the other Rules are to be looked at sequentially.

Rule 1: Classification to be determined per the "Headings"

Rule 1 states :

The titles of Sections, Chapters and sub-chapters are provided for ease of reference only; for legal purposes, classification shall be determined according to the terms of the headings and any relative Section or Chapter Notes and, provided such headings or Notes do not otherwise require.

As stated above, each Section is divided into Chapters. Further, each Chapter within the Sections have Chapter titles.

As per Rule 1, the Section or Chapter Titles cannot be used for classification. The use of Chapter heading alone may not provide an accurate picture of what the Chapter covers. For example the Heading of Chapter 84 refers to nuclear reactors, machinery, etc. but even a hand pump falls under Chapter 84.

According to Rule 1, one should give primacy to the Headings along with Chapter and Section Notes. The above rule lays down the following propositions:

- (a) The titles of sections, Chapters and sub-chapters do not have any legal force.
- (b) Terms of headings read with the related section and Chapter notes are relevant for the purpose of classification.

The rules of interpretation need not be resorted to when classification is possible on the basis of description in headings, sub-heading, along with the Chapter notes and section notes.

The Section Notes and Chapter Notes are part of the Act itself, and have statutory backing. Thus, no further Rule is required to be looked into, if classification is possible on the basis of the Tariff Entry read with Chapter Notes and Section Notes.

For instance, an assessee was manufacturing Aluminum foil cone containers. The assessee was classifying the same under Customs Tariff Heading (CTH) 76.16 [Other articles of aluminum], whereas the Department sought to classify the goods under CTH 48.23 [Other paper, paperboard, cellulose wadding and webs of cellulose fibers; other articles of paper pulp, paper, paper-board]. However, the Tribunal in case of *Monita Containers v. CCE (2007) 213 ELT 262 (CESTAT)* while classifying the product under CTH 76.16, held:

When the Note is specific in its excluding the said goods, they cannot be included by mere reference to the title of Chapter 48: "Paper and Paper board; Articles of Paper Pulp, of Paper or of Paper board", as was sought to be urged on behalf of the Revenue. Even the contention that the Chapter Note will not apply because Rule 3(b) of the Interpretative Rules, is misconceived, as it has been specifically provided in Rule 1 of the Rules for the interpretation of the First Schedule. Therefore, if there is no specific Chapter Note requiring otherwise, Rule 2 onwards including Rule 3(b) of the Rules for the Interpretation cannot be invoked.

The Supreme Court in case of *CCE s M/s Simplex Mills Co Ltd (2005) 181 ELT 345 (SC)*(3 Member Bench) held that Rule-1 gives primacy to the Section and Chapter Notes along with terms of the headings. They should be first applied. If no clear picture emerges then only can one resort to the subsequent rules.

Rule 2(a): Classification of incomplete or un-assembled goods

Rule 2(a) of the Interpretation Rule :

2.(a) Any reference in a heading to an article shall be taken to include a reference to that article incomplete or unfinished, provided that, as presented, the incomplete or unfinished articles has the essential character of the complete or finished article. It shall also be taken to include a reference to that article complete or finished (or falling to be classified as complete or finished by virtue of this rule), presented un-assembled or dis-assembled.

According to this Rule, if an incomplete article has the essential characteristics of the final product, then the Tariff Item covering the said final product would also cover the incomplete product, so presented. Further, the finished article would also include the article presented in an unassembled state.

For example, an assessee was manufacturing crayplas shapeless plastic crayon. The assessee was classifying the same under CETH 9609 00 which covers "pencils, crayons, pencil leads, pastels, drawing charcoals, writing or drawing chalks", whereas the Department asserted coverage under sub-heading 3204.19 relating to "pigments and preparation based thereon other than those in unformulated and unstandardized or unprepared form, not ready for use." The Supreme Court in case of *Camlin Ltd. v. CCE (2003) 155 ELT 138 (CEGAT) [affirmed in (2005)180 E.L.T. 307 (S.C.)]* while classifying the goods under CETH 9609 00, held:

GIR 2(a) also, allows classification of incomplete or unfinished goods having the essential characteristics of complete or finished goods under a heading appropriate to such complete or finished goods. In the instant case, the impugned goods only require to be

given the shape of crayons before they can be made into finished crayons and as such, they can be considered as incomplete or unfinished goods.

In another case of *LML Ltd. v. CC (1999) 105 ELT 718 (CEGAT) affirmed in 1999 (107) E.L.T. A119 (S.C)*, it was held that a scooter body unit without engine is classifiable as scooter (CETH 871190). The Court placed reliance on HSN Explanatory Note for Rule 2(a) which states:

“An incomplete or unfinished vehicle is classified as the corresponding complete or finished vehicle provided it has the essential character of the latter [see Interpretative Rule 2(a)] as for example:

- (A) *A motor vehicle, not yet fitted with the wheels or tyres and battery.*
- (B) *A motor vehicle not equipped with its engine or with its interior fittings.*
- (C) *A bicycle without saddle and tyres.*

This Chapter also covers parts and accessories which are identifiable as being suitable for use solely or principally with the vehicles included therein, subject to the provisions of the Notes to Section XVII (see the General Explanatory Note to the Section).”

Determination of “essential characteristics”

In the case of *Shivaji Works Ltd. v. CCE (1994) 69 ELT 674 (CEGAT)*, it was held that the functional test is the correct test for determining the character of a product, i.e. ‘primary function’ is ‘essential characteristic.’ Unless the incomplete product is incapable of functioning like the finished goods, this rule is not applicable.

Goods in SKD or CKD condition

According to the second part of Rule 2(a), goods in unassembled condition would be covered along with the finished goods .

This is essential when certain goods are to be dismantled prior to despatch, for convenience of transport.

In the case of *CCE s. Scan Machineries, (2009) 234 ELT 282 (CESTAT)* the assessee cleared machinery in a phased manner but paid the entire duty at the time of the first clearance of parts, as per trade practice. The clearance was against a single purchase order. It was held that clearance is of a single machine and not as parts of machine.

In case of *CC. s Sony India (2008) 231 ELT 385 (SC)* while deciding whether import of Colour Television components in CKD condition was assessable as CTVs , the Supreme Court held that components imported were not treatable as complete TV because “*Rule 2(a) of Rules for Interpretation of Tariff is applicable only if all components presented at same time for customs clearance. When goods are brought in 94 different consignments then clubbing of all consignments of different dates is not permissible since goods brought are not having essential character of CTV and cannot be taken as complete CTVs. In fact there is no finding that goods*

brought could make specified number of CTVs. Also a complicated process to be undertaken for making impugned goods useable for assembling CTVs which fails the test of essential character.”

In the case of *Tata Motors v. CCE (2008) 222 ELT 289 (CESTAT) affirmed in (2016) 337 E.L.T. A99 (S.C.)*], it was observed that the expression “as presented” should be given the same meaning as “as cleared.” Thus, if different parts were cleared from different units at different points of time, duty cannot be demanded by treating them as motor vehicle chassis in CKD condition.

However, the same principle may not be applicable for an import entitlement which is specifically meted out to “parts” as held in case of *Union of India v. Tara Chand (1983) 13 ELT 1456 (SC); CC v. Reliance Industries Ltd. (2000) 115 ELT 15*.

Rule 2(b): Classification of Mixture or Combinations

(b) Any reference in a heading to a material or substance shall be taken to include a reference to mixtures or combinations of that material or substance with other materials or substances. Any reference to goods of a given material or substance shall be taken to include a reference to goods consisting wholly or partly of such material or substance. The classification of goods consisting of more than one material or substance shall be according to the principles of rule 3.

Rule 2(b) states In case of *CC v National Carbon Co. (1989) 41 ELT 433 (Tribunal)* the scope of Rule 2(b) was defined as

“It consists of two parts. The first part relates to the mention of material or substance under any heading and it has been set out that the reference to the material or substance shall be taken to include a reference to mixtures of that materials or substances. This part does not talk about finished goods made out of the material or substance. The second part of the rule deals with the goods of a given material or substance mentioned under any heading of the tariff and reference is to be taken to include a reference to goods consisting of such material or substance. This part does not deal with the composite goods made.”

On the basis of the same it can be understood that for classification of composite goods made of different materials, interpretative rule 2(b) is not applicable. (*Rule 3(b) needs to be referred*).

In the case of *Dhariwal Industries s. CCE (2014) 304 ELT 585 (CESTAT) maintained in (2015) 319 E.L.T. A123 (S.C.)*, the assessee was manufacturing “Calcutta meetha pan” which was a mixture of various items, primary ingredient being pan leaf. The product contained 70% of dry dates and mixture of spices and sweetener. It was held that classification, as per Rules 2(b) and 3(b), ought to be under “Fruits, Nuts and Other Edible parts” under CETH 20.08 and not as “pan masala.”

While applying the aforesaid rules, some conflict may arise. For example:

- a mixture or combination containing more than one material may be classified under more

than one heading by applying rule 2(b). If it contains two items A and B, one classification may be on the basis of “A” and other on the basis of “B”.

- There may be two descriptions which may both be possible

In such cases, resort to Rule 3 needs to be made :

Rule 3(a): Prefer the Specific entry over the general entry

Rule 3(a) states :

3. When by application of rule 2(b) or for any other reason, goods are, prima facie, classifiable under two or more headings, classification shall be effected as follows:

(a) The heading which provides the most specific description shall be preferred to headings providing a more general description. However, when two or more heading search refer to part only of the materials or substances contained in mixed or composite goods or to part only of the items in a set put up for retail sale, those headings are to be regarded as equally specific in relation to those goods, even if one of them gives a more complete or precise description of the goods.

Rule 3 stipulates that the Heading that provides the more specific description shall be preferred over an entry with generic description.

In case of *Jyoti Industries v. CCE (2000) 115 ELT 559 (CEGAT)*, it was held that Kitchen sink is more appropriately covered under “sanitaryware” (i.e. CTH 7324 [Sanitary ware and parts thereof]) which is a specific description than “household articles of iron and steel” (i.e. CTH 7323 [Household articles of iron and steel]) which is a general description.

In case of *Dunlop India Ltd v UOI (1983) 13 ELT 1566 (SC)* , it was held that Vinyl Pyridine latex is classifiable as ‘raw rubber’ under Item 39 of the Indian Tariff Act, 1934 and not under Item No. 87 as residuary Item or under Item 82(3) as artificial or synthetic resins. The principle was laid down that “when an article is by all standards classifiable under a specific item in the Tariff Schedule it would be against the very principle of classification to deny it the parentage and consign its residuary item”.

In case of *Commissioner of VAT v Taneja Mines (2011) 273 ELT 228 (Delhi)(DB)* it was held that religious picture would mean pictures used for purpose of religious worship and propagation. The mere fact that the religious pictures are mounted/framed is a matter of irrelevance. Also, the cost of the item is again irrelevant. Frames are nothing more than accessories for safe keeping and do not give any essential characteristics to the goods. Hence use of gold in religious pictures which depict divinity is in consonance with the concept of the divine. The use of gold plated nickel foil would add ambience to the pictures and thereby increase its value in the aesthetic sense for a man of religious sentiment and theist views.

Rule 3(b): Essential character test for Mixtures or Composite Goods

Rule 3(b) states :

(b) Mixtures, composite goods consisting of different material is or made up of different components, and goods put up in sets for retail sale, which cannot be classified by reference to (a), shall be classified as if they consisted of the material or component which gives them their essential character, in so far as this criterion is applicable.

In the case of mixtures or composite goods, resort is to be had to determining the material/component of the product which gives it its essential character.

In the case of *CCE v. INARCO* . (2015) 318 ELT 604 (SC), it was held that floor tiles containing 13.3% PVC (plastic), 84.9% limestone with plastic as binder is to be classified as 'article of stone, cement' as per the test of 'essential character'.

In the case of *Xerox India Ltd. v. CC, Bombay*, citation where the dispute pertained to classification of digital printers, with several functions (fax, copier, etc), reliance was placed on Rule 3(b) to classify the item under CTH 8471 as printer, since printing emerged as the principal function.

In *re Samsung India Electronics P. Ltd. – (2016) 340 ELT 430 (AAR)* it was held that mobile phone with zoom camera is to be classified as a phone, and not as camera, as per its primary function.

In *A V Venkateswaran, Collector of Customs v. Ramchand Subhraj 1983 (13) ELT 1327 (SC)* fountain pens with gold nibs, caps, were held to be classifiable as fountain pens.

However, it is to be noted that the said rule would not apply if the articles have a separate identity. In the case of *CC v. Siyaram Silk Mills (2009) 235 ELT 241 (CESTAT)* where a shirt and tie were sold together, it was held that the set cannot be classified as shirt, and they would be classified as separate items.

Rule 3(c): If both are specific – latter the better

Rule 3(c) states :

(c) When goods cannot be classified by reference to (a) or (b), they shall be classified under the heading which occurs last in numerical order among those which equally merit consideration.

In case of *Mahindra & Mahindra v. CCE – (1999) 109 ELT 739 (CEGAT)*, it was held that iftariff entries 87.03 and 87.04 are equally applicable, then goods will be classifiable under 87.04, as it occurs later in the Tariff.

Rule 4: Akin goods

Rule 4 states :

4. Goods which cannot be classified in accordance with the above rules shall be classified under the heading appropriate to the goods to which they are most akin.

In the case of CCE vs. KWH Helioplastics Ltd. (1998) 97 ELT 385 (SC), it was observed that in order to resolve the persisting classification dispute, the relationship of the goods under dispute vis-à-vis the description of the goods under the disputed headings should be ascertained. The relationship with a particular heading depends upon the description, purpose and use of goods. If the relationship is established, goods should be classified where they are akin to the description in the Tariff.

Rule 5: Classification of packing containers and packing materials

Rule 5 states:

5. In addition to the foregoing provisions, the following rules shall apply in respect of the goods referred to therein:

- (a) Camera cases, musical instrument cases, gun cases, drawing instrument cases, necklace cases and similar containers, specially shaped or fitted to contain a specific article or set of articles, suitable for long-term use and presented with the articles for which they are intended, shall be classified with such articles when of a kind normally sold therewith. This rule does not, however, apply to containers which give the whole its essential character;*
- (b) Subject to the provisions of (a) above, packing materials and packing containers presented with the goods therein shall be classified with the goods if they are of a kind normally used for packing such goods. However, this provision does not apply when such packing materials or packing containers are clearly suitable for repetitive use.*

This provision is made to ensure that the packing and the goods are charged at the same rate of duty.

In the case of *Print-o-pack v. CCE (2012) 275 ELT 95 (CESTAT)*, the assessee was placing sugar cone (i.e. ice-cream cone) in an Aluminium foil cone. It was held that the Aluminium foil cone is used only as packing and the entire item would be classified as 'ice-cream cone' only.

Rule 6: Goods are comparable at the same level only

Rule 6 states:

6. For legal purposes, the classification of goods in the sub-headings of a heading shall be determined according to the terms of those sub headings and any related sub headings Notes and, mutatis mutandis, to the above rules, on the understanding that only sub headings at the same level are comparable. For the purposes of this rule the relative Section

and Chapter Notes also apply, unless the context otherwise requires.

The sub-headings within the same heading are comparable with each other, but not with sub-headings under any other heading. Accordingly, the heading is to be first determined, and then the sub-heading has to be ascertained.

Classification of Parts as per Section/Chapter Notes

Classification of parts is subject to the notes in the Sections and Chapters. Broadly, parts suitable solely for a particular machine generally fall under the same heading/ sub-heading in which the main item falls.

However, there are certain exceptions to this general rule.

Parts of General Use

Parts of general use consist of tube and pipe fittings, ropes, cables, chains, screws, bolts, etc. For example, a bolt used in a vehicle will be classified as “bolt” and not as “motor vehicle part.”

Part of part is part of whole

In the case of Needle Roller Bearings v. CCE (2000) 124 ELT 577 (CEGAT); Kanwar Sewing Machine, New Delhi v. CC, Bombay (1983) 12 E.L.T. 804 (C.E.G.A.T.), it was held that ball bearings form part of a machine. Hence, a part of a ball bearing is also a part of a machine.

In the case of Nalanda Manufacturing Co.v. CCE (1998) 102 ELT 289 (Tribunal), it was similarly held that part of a refill is also a part of a ball point pen.

Chapter 7

Classification Principles Evolved by Courts

Trade / Common Parlance Understanding

It is a cardinal principal of Tariff interpretation that resort must be had to the popular sense” instead of the scientific and technical meaning. “Popular sense” connotes that which people conversant with the subject matter, with which the statute is dealing, would attribute to it.

Based on this principle, it was held in the case of *Muller & Phipps (India) c. CCE (2004) 167 ELT 374 (SC)*, that “Prickly Heat powder” is ‘medicament’ asper common parlance, though for the purpose of Drugs Act and Sales Tax Act, the product has been treated as a drug.

In the case of *CCE v. Connaught Plaza Restaurant P. Ltd (2012) 286 ELT 321 (SC)* , it was held that, *qua* “Soft-serve”, in the absence of a definition of the term “ice cream”, it is to be construed asper common parlance, even if under the provisions of Food Adulteration Act, it may not fall within the meaning of ice cream. What matters is the way the consumer perceives the product.

However, it is to be noted that trade parlance is to be examined only if the tariff entry is ambiguous as held in *Nirlon Synthetic Fibres v. UOI (1999) 110 ELT 445 (Bom) (DB)*

Section/Chapter Notes prevail over Trade Parlance

The classification under the Customs Tariff is not dependent on trade parlance when the parameters are precisely laid down in the Tariff itself, in the description of the Section Notes, Chapter Notes read with the Interpretative Rules, all of which have statutory force.

In *CCE vs Wood Polymers Ltd (1998)97 ELT 193 (SC)* it was held that classification should be done as per the rules of interpretation contained in the Tariff and not as per trade parlance and commercial understanding.

However this is so if the rules of interpretation give correct and conclusive answer. Otherwise, one has to look at trade parlance.

The Supreme Court in case *OK Play (India) Ltd v CCE 2005 (2005) 180 ELT 300 (SC) (3 Judges Bench)* laid down the parameters for classification of goods as under:

- No single universal test can be applied for correct classification. There cannot be static parameter for correct classification.
- HSN along with explanatory notes provide a safe guide for interpretation of an entry.
- Equal importance to be given to Rules of Interpretation of Excise Tariff
- Functional utility, design, shape and predominant usage have also got to be taken into

account while determining classification of an item

- The aforesaid aids and assistance are more important than names used in trade or common parlance in the matter of correct classification.

Technical meaning prevails in certain cases

In the case of *Akbar Badruddin Jiwani v. CC (1990) 47 ELT 161 (SC)*, it was held that if the tariff entry is used in a scientific or technical sense, or when there is conflict between entries in the tariff, common parlance will not prevail.

End Use based/ Functional test Classification

It has been held in *CCE v. Carrier Aircon Ltd. (2006) 147 STC 421 (SC)*. that end use to which a product is put is not determinative of its classification . For example, “axle studs” will be classifiable as “screws” even if these are used on motor vehicles as held in *Kwality Sales Corporation v. CCE (1986) 23 ELT 137 (CEGAT)*

However, the exception to this norm is where classification is as per the function of the relevant goods. In such cases, end use is a relevant factor to determine the classification. For example, it was held that plastic pipes and pipe fittings manufactured with the intention of being used as part of irrigation systems should be classified as parts of irrigation system and not as plastic pipes .[*CCE v. EPC Irrigation (2002) 142 ELT 630 affirmed in (2002) 146 E.L.T. A88*]

Other sources

(a) **Resort to residuary entry**

It is a settled principle that it must be proved by the Department that the goods cannot be brought under a specific tariff item by any conceivable process of reasoning, and only then resort can be had to classifying the goods under a residuary entry as held in *Bharat Forge & Press Industries (P) Ltd. v. CCE (1990) 45 E.L.T. 525 (S.C.)*.

(b) **Dictionary**

There are contrary views on dependability on dictionaries for finding the meaning of undefined terms.

- In the absence of any definition of any word or expression in statute, it would be permissible to refer to the dictionary meaning of that expression as held in the case of *Star Paper Mills v CCE (1989) 43 ELT 178 (SC)*.
- Reference to a dictionary is a somewhat elusive guide, as it gives all the different shades of meaning as held in *CCE v. Krishna Carbon Paper Co. (1988) 37 ELT 480 (SC)*

(c) **Meaning under other Acts or Standards (e.g. ISI/BIS Standards)**

Such statutes are for quality control and are not relevant for the purposes of classification of goods as held in case of *Indian Aluminum Cables Ltd. (1985) 21 ELT 3 (SC)*. Similarly, the meaning under Drugs and Cosmetics Act is not to be adopted or resorted to for purpose of classification as held in *Wipro Ltd. v. CCE (2001) 136 ELT 885 (CEGAT)*

(d) Advertisements/ Product Literature

It has been held in case of **Blue Star Ltd. v. UOI (1980) 6 ELT 280 (Bom.)**; that goods cannot be classified on the basis of the description/ use claimed by manufacturer in advertisements.

(e) Importance of expert opinion and other evidentiary value

Very often, when there is dispute regarding nature of goods, it will be advisable for the authorities as well as the taxable person to obtain opinion from technical experts or a person dealing in the goods to know the true character of the goods. It has been consistently held that expert opinion is to be taken to understand the nature of product but cannot decide the classification of the goods. It has no binding effect, but only guiding effect on the authorities because ultimately, proper classification of the product is to be decided by the jurisdictional authority. The Delhi Tribunal in the case of **Guest Keen Williams (1987) 29 ELT 68** has observed in para 23 as follows:

“23.We have also examined Shri Gujral’s argument that the opinion of the expert should be considered. He cited the case of *K. Mohan & Co., Bombay s. Collector of Customs, Madras* reported in (1984)15 E.L.T. 430, and also cited (1984) E.C.R. 1086 and (1986) 6 E.C.R. 334. While we agree that expert opinion should be considered, we observe that it is the language of the notification and the facts of the matter which should be examined. An expert’s opinion has to be given due respect but it cannot be the deciding, or binding factor.

The above judgment has been maintained by the Supreme Court in case of *Guest Keen Williams Ltd. v. Collector – (1997)95 E.L.T. A144(S.C)*

It was also held that expert opinion expressed by specialized institutions has to be preferred over the opinion of individual experts obtained at the instance of the assessee. These expert opinions are not ignorable particularly if they are given by public authorities. Opinion of any other persons who has knowledge in the field regarding the product shall be given due importance for deciding the classification of the product. The opinion of authorities like Textile Commissioner, Law Ministry, etc. are to be given due importance for classification of the product.

(f) Importance of ISI specification

In many cases, the product is manufactured as per ISI specification. Sometimes, the taxable person also affixes ISI mark on the product. The ISI specification certifies the quality of the product and not the name or character. View of the ISI shall be looked at with some amount of credibility for deciding the classification. It can be used as

specialized material in expert opinion, but other tangible consideration should also weigh while determining the classification. Therefore, description of product in ISI has limited value in determining the classification of goods.

(g) Finance Minister's speech

In some case, Finance Minister in the Finance Bill may make certain reference while introducing the changes. Speech of the Finance Minister represents the manner in which the authorities have understood the change. Therefore, the speech of the Finance Minister can be helpful in deciding the classification as held by the Gujarat High Court in the case of *ECHJAY Industries v. UOI (1988) 34 ELT 42 (Guj)*

(h) Importance of Trade Notice/Circulars, etc.

Section 168 of GST Act empowers the Board or the Competent Authority of the State wherever it considers necessary for the purpose of uniformity in the implementation of the Act to issue such orders, instructions or directions to GST Officers as it may deem fit. Similar provisions are contained in section 37B of Central Excise Act. It has been consistently held that trade notices, tariff advices, circulars, press notes etc. issued by the authorities are hardly relevant for the purpose of classification of the product under Central Excise Act as it cannot override the true meaning or interpretation underlined statutory provisions. The classification has to be decided by the authorities based on the description of relevant tariff entry and not on the basis of tariff advice or instructions or circulars etc.

(i) Provision at the relevant time

Sometimes, the tariff description of the entry may be amended over a period of time. While classifying the product, the tariff description of relevant period should only be used for classification. For example, say goods are supplied in the month of August 2017. Further assume there is amendment in the tariff entry in April 2018. The classification of the product based on tariff description in August 2017 should only be considered for classification for supplies made in August 2017. Subsequent amendment will not be relevant for the purpose of deciding the classification.

(j) Beneficial classification

It is a well-established principle that when the goods are classifiable under two different items or said items or ambiguous sentences leave reasonable doubt about its meaning, the benefit of doubt is given to the manufacturer and that classification should be adopted which is beneficial to the manufacturer. This is based on the principle that when the legislature has not clearly laid down the provisions of law benefit of doubt is given to the manufacturer. The Bombay High Court in the case of *Garware Nylons Ltd. v. UOI (1980) 6 ELT 249 (Bom)* has held that the classification beneficial to the assessee should be adopted.

Chapter 8

Classification of Services as per Notification

The Central Government, on the recommendations of the GST Council, has issued Notifications Number 11/2017-CT (Rate) dated 28.06.2017 prescribing the Rate of Tax (Schedules) for specified services under CGST/IGST ("Rate Notification").

The Central Government by way of further Notifications amends from time to time the Rate Notification to specify any change of rate of tax on any service, from time to time.

It is pertinent to note that the Explanation to the Rate Notification No. 1/2017-Central Tax (Rate) dated 28.06.2017 states thus :

For the purposes of this Notification:

- (i)
- (ii) *Reference to "Chapter", "Section" or "Heading", wherever they occur, unless the context otherwise requires, shall mean respectively as "Chapter", "Section" and "Heading" in the annexed scheme of classification of services (Annexure).*

Along with the rate notification a detailed annexure for scheme of classification of services has been given . However unlike for goods, no method has been prescribed as to how one has to read the given annexure along with the Rate Notification.

Reading the Annexure to Notification No 11/2017-CT Rate dated 28.06.2017

The given annexure is based on a six digit format which is akin to HSN Classification for goods. Section 5 of Chapter 99 of Annexure reads as under:

Annexure: Scheme of Classification of Services			
S.No.	Chapter, Section, Heading or Group	Service Code (Tariff)	Service Description
(1)	(2)	(3)	(4)
1	Chapter 99		All Services
2	Section 5		Construction Services
3	Heading 9954		Construction services
4	Group 99541		Construction services of buildings
5		995411	Construction services of single dwelling or multi dwelling or multi-storied residential buildings
6		995412	Construction services of other residential buildings such as old age homes, homeless shelters, hostels and the like
7		995413	Construction services of industrial buildings such as buildings used for production activities (used for assembly line activities), workshops, storage buildings and other similar industrial buildings
8		995414	Construction services of commercial buildings such as office buildings, exhibition and marriage halls, malls, hotels, restaurants, airports, rail or road terminals, parking garages, petrol and service stations, theatres and other similar buildings
9		995415	Construction services of other non-residential buildings such as educational institutions, hospitals, clinics including veterinary clinics, religious establishments, courts, prisons, museums and other similar buildings
10		995416	Construction services of other buildings nowhere else classified
11		995419	Services involving repair, alterations, additions, replacements, renovation, maintenance or remodeling of the buildings covered above

Contents of an Entry

- Here Chapter is of 2 digits (Chapter 99)
- Section is of 1 digit after Chapter (Section 5)
- Heading is of 1 digit after Section (Heading 9954)
- Tariff Item is of 2 digits after Heading (995411)

Principles of Classification

No principles for classification of services have been prescribed under notification for rate or under law for the services. The principles of classification as applicable for Goods cannot be applied on services ..

A clue can be taken from the erstwhile service tax provisions and also from CPC (Central Product Classification) by United Nations Statistical Commission whose list of services is akin to the Annexure to Notification No 11/2017-CT Rate dated 28.06.2017.

Interestingly, The Central Board for Indirect Tax and Customs issued “**Explanatory Notes to the Scheme of Classification of Services**” on 12th June 2018 wherein it has been specified that-

The Scheme of Classification of Services adopted for the purposes of GST is a modified version of the United Nations Central Product Classification. 2. The Explanatory notes for the said Scheme of Classification of Services is based on the explanatory notes to the UNCP.

The explanatory notes indicate the scope and coverage of the heading, groups and service codes of the Scheme of Classification of Services. These may be used by the assessee and the tax administration as a guiding tool for classification of services. However, it may be noted that where a service is capable of differential treatment for any purpose based on its description, the most specific description shall be preferred over a more general description.

What is CPC (Central Product Classification)?

In the Preface to the document issued by Department of Economic and Social Affairs (Statistical Division) of United Nations in 2015 titled “Central Product Classification-Version 2.1”, it has been stated thus :

“The Central Product Classification (CPC) constitutes a complete product classification covering all goods and services. It serves as an international standard for assembling and tabulating all kinds of data requiring product detail, including statistics on industrial production, domestic and foreign commodity trade, international trade in services, balance of payments, consumption and price statistics and other data used within the national accounts. It provides a framework for international comparison and promotes harmonization of various types of statistics related to goods and services”.

Further in the Overview to the said document it has thus been stated about CPC:

The Central Product Classification (CPC) consists of a coherent and consistent classification structure for products based on a set of internationally agreed concepts, definitions, principles and classification rules. The classification structure represents a standard format to organize detailed information on products – be it on production, transformation, trade or consumption – according to economic principles and perceptions.

It is pertinent to note that with regard to services, before the development of the CPC, no international classification covering the whole spectrum of outputs of the various service industries and serving the different analytical needs of statistical and other users was available

Structure of CPC

The overall set of products is subdivided into a hierarchical, five-level structure of mutually exclusive categories.

- The categories at the highest level are called sections, which are numerically coded categories. The sections sub-divide the entire spectrum of products into broad groupings,

such as “Agriculture, forestry and fishery products” (section 0), “Constructions and construction services” (section 5) or “Community, social and personal services” (section 9).

- The classification is then organized into successively more detailed categories, which are numerically coded: two-digit divisions; three-digit groups; four-digit classes; and, at the greatest level of detail, five-digit sub-classes.

Principles, Definitions and classification rules for reading CPC

Various principles enumerated for reading and understanding CPC are given as its integral part of document. The relevant points in relation to classification for services under CPC are briefed below:

1. The CPC, covering all services, is a system of categories that are both exhaustive and mutually exclusive. This means that if a service does not fit into one CPC category, it must automatically fit into another. Consistent with the other principles used, homogeneity within categories is maximized.
2. The CPC classifies services based on the properties and its intrinsic nature as well as on the principle of industrial origin.
3. The importance of the industrial origin of services was underscored by the attempt to group into one CPC subclass mainly the services that are the output of a single industry. Through their linkage to the criterion of industrial origin, the input structure, technology and organization of characteristics of services are also reflected in the structure of the CPC.
4. In addition, efforts have been made to define each sub-class in sections 0 to 4 of the CPC as the equivalent of one heading or sub-heading or the aggregation of several headings or subheadings of the Harmonized Commodity Description and Coding System (HS), owing to the fact that the HS is a detailed classification of transportable goods that is widely accepted for use in international trade statistics by virtually all countries.

Application of CPC

1. Rules of Interpretation

According to the rules of interpretation of CPC in the context of services, it should be classified on following principles:

- A) When services are, *prima facie*, classifiable under two or more categories, classification shall be effected as follows, on the understanding that only categories at the same level (sections, divisions, groups, classes or subclasses) are comparable:
 - a) The category that provides the most specific description shall be preferred to categories providing a more general description;

- b) Composite services consisting of a combination of different services which cannot be classified by reference to (a) shall be classified as if they consisted of the service which gives them their essential character, in so far as this criterion is applicable;
 - c) When services cannot be classified by reference to (a) or (b), they shall be classified under the category that occurs last in numerical order among those that equally merit consideration.
- B) Services that cannot be classified in accordance with the above rules shall be classified under the category appropriate to the services to which they are most akin.

II. Explanatory Notes

The explanatory notes provide descriptions of services that are included in each subclass, as well as examples of similar services that are excluded, for reference purposes. In some cases explanatory notes are also available for categories of higher aggregated levels of the CPC structure. Whenever an exclusion statement is provided, it is accompanied by an exact cross-reference to indicate the code of the subclass where the product in question is actually classified. The exclusions are sorted by cross-referenced CPC code in numerical order; they do not indicate a ranking by importance. Although the title description should define the boundary of the sub-class, the explanatory notes clarify further the border and content of the sub-class.

The explanatory notes are not intended to present an exhaustive list of all the products under each heading; they should be regarded only as lists of examples to illustrate the subclass content.

It has been further provided in the CPC document issued by United Nations that

“It should be noted that if CPC categories are utilized for purposes other than statistical ones - for example as a source for the preparation of legal documents or for such purposes as procurement - those who prepare the legal document in which reference is made to CPC categories, not the developers of the classification, are responsible for explaining the use of those categories in the legal document”.

Example on CPC Structure and Understanding

The CPC and its related rules can also be best understood with some illustrations which are given below –

- The facility of mining is provided by government to various business entities. These are services provided by government and are liable for payment of GST under RCM by mine holder. The rate for government services are generally 18%. However under entry no.17 in heading 9973 for leasing, read with annexure there is a specific entry which reads as under

250	Group 99733		Licensing services for the right to use intellectual property and similar products
251		997331	Licensing services for the right to use computer software and databases
252		997332	Licensing services for the right to broadcast and show original films, sound recordings, radio and television programme and the like
253		997333	Licensing services for the right to reproduce original art works
254		997334	Licensing services for the right to reprint and copy manuscripts, books, journals and periodicals
255		997335	Licensing services for the right to use research and development products
256		997336	Licensing services for the right to use trademarks and franchises
257		997337	Licensing services for the right to use minerals including its exploration and evaluation
258		997338	Licensing services for right to use other natural resources including telecommunication spectrum
259		997339	Licensing services for the right to use other intellectual property products and other resources nowhere else classified

- Further the Explanatory Notes under UNCPC to the Classification 9973 reads as under:

99733 Licensing services for the right to use intellectual property and similar products

This group includes permitting, granting or otherwise authorizing the use of intellectual property products and similar products

Note: This covers rights to exploit these products, such as licensing to third parties; reproducing and publishing software, books, etc.; using patented designs in production processes to produce new goods and so on. Limited end user licences, which are sold as part of a product (e.g., packaged software, books) are not included here.

This group does not include:

- licence fees as integral part of consumer goods (e.g., end-user licenses for books, records, software)
- preparation, drafting and certification services concerning patents, trademarks, copyrights and other intellectual property rights, cf.998213
- legal services related to drawing up or certification of patents, trademarks, copyrights and other intellectual property rights, cf.998213
- management services for copyrights and their revenues (except from motion pictures), cf. 998599
- management services for rights to industrial property (e.g., patents, licences, trademarks, franchises etc.), cf. 998599
- management services for motion picture rights, cf. 999614
- management services for artistic rights, cf. 999629

- The said sub-classification is further classified as under (reproduced)

997337 Licensing services for the right to use minerals including its exploration and evaluation

This service code includes licensing services for the right to use, mineral exploration and evaluation information, such as mineral exploration for petroleum, natural gas and non-petroleum deposits

997338 Licensing services for the right to use other natural resources including telecommunication spectrum

- Now, on a perusal of the said classification on which Notification No. 11/2017-CT (Rate) dated 28.06.2017 is based, it is evident that the classification of service in question can be made under tariff item 997337 or 997338 as the case maybe. Since the entry is unambiguous and defines the nature of the service clearly, the classification as given by UN CPC should be followed.
- The rate of GST in case of tariff item 997337 is the rate applicable on the goods which are extracted from the mine. Generally the rate for such goods under GST is 5%. Hence when a specific entry has been given, the rate of GST for such royalty payment should be 5% instead of 18% as general rate.

Broad Structure of CPC

The broad structure of CPC in relation to services on the basis of which the CGST Rate Notification No 11/2017 dated 28.06.2017 is also based, is summarized as under:

Section	Division	Groups	Classes	Subclasses
5	Constructions and construction services			
	53	2	10	24
	54	7	37	61
6	Distributive trade services; accommodation, food and beverage serving services; transport services; and electricity, gas and water distribution services			
	61	2	18	120
	62	5	45	269
	63	4	10	16
	64	2	8	28
	65	3	7	28
	66	1	3	8
	67	7	22	25
	68	1	3	7
	69	2	5	6
7	Financial and related services; real estate services; and rental and leasing services			
	71	7	24	57
	72	2	7	14
	73	3	16	28

8 Business and production services				
81	Research and development services	4	8	40
82	Legal and accounting services	4	9	12
83	Professional, technical and business services (except research, development, legal and accounting services)	9	33	80
84	Telecommunications, broadcasting and information supply services	6	21	38
85	Support services	6	27	47
86	Support and operation services to agriculture, hunting, forestry, fishing, mining and utilities	3	12	25
87	Maintenance, repair and installation (except construction) services	3	17	29
88	Manufacturing services on physical inputs owned by others	9	31	125
89	Other manufacturing services; publishing, printing and reproduction services; materials recovery services	4	8	10
9 Community, social and personal services				
91	Public administration and other services provided to the community as a whole; compulsory social security services	3	17	32
92	Education services	6	12	14
93	Human health and social care services	5	12	32
94	Sewage and waste collection, treatment and disposal and other environmental protection services	6	15	28
95	Services of membership organizations	3	6	14
96	Recreational, cultural and sporting services	7	23	38
97	Other services	4	13	13
98	Domestic services	1	1	1
99	Services provided by extraterritorial organizations and bodies	1	1	1

Legal Backing to UNPCP

However, these rules of classification have not been prescribed under the GST Laws and hence cannot be enforced upon the tax payer or the tax authorities. The given CPC schedule is the clear base on which Notification No. 11/2017-CT (Rate) dated 28.06.2017 is based, but since reference to the same has been given only through a Press Release the same shall stand on weak ground in case the same is referred completely, by any of the stakeholders at the time of classification disputes. The judicial precedents from courts shall have a binding effect over the CPC Schedule.
